

Use eSight to:

Live

Engage in virtually all Activities of Daily Living (ADLs). See the faces of loved ones, sometimes for the first time. Read, watch TV, resume previously abandoned hobbies and *actually* be mobile.

Work

Use eSight to thrive in the workplace, from the office to the factory. Lead meetings, travel and commute. Use a variety of tools and technologies and collaborate with confidence.

Study

Fully participate in academic life. View the board from any seat in the classroom. Study and socialize with confidence and move independently between buildings and events.

How it works:

- eSight uses breakthrough technology to enhance functional vision for the legally blind.
1. The device's high-speed, high-resolution camera captures what a user is looking at in real time.
 2. eSight algorithms enhance the video and project it onto two OLED screens in front of the user's eyes.
 3. Full color video images can be seen by the user with unprecedented visual clarity and practically no delay.

eSight has helped individuals living with:

- Macular Degeneration
 - Diabetic Retinopathy
 - Stargardt Disease
 - Ocular Albinism
 - Optic Nerve Hypoplasia
 - Optic Atrophy
 - Leber's Hereditary Optic Neuropathy
 - Cone-Rod Dystrophy
 - Nystagmus
 - Retinopathy of Prematurity
 - Some forms of Glaucoma
 - Some forms Retinitis Pigmentosa (RP)
- And others, which eSight continues to research solutions to every day.

Everyone Deserves To See

eSight is the only clinically validated medical device in existence that allows the legally blind to actually see.

Instant Sight

Instantaneous auto-focusing between short-range vision (watching TV), and long-range vision (looking outside a window), with virtually no delay.

Wearable Tech

Comfortable, wearable and hands-free electronic glasses that enable those living with low vision to make use of both hands while using eSight to see.

Enables Mobility

Provides true mobility so that a legally blind individual can use eSight to be independently mobile—from walking, exercising and commuting—to working, studying and traveling.

A day will come when the legally blind can actually see. That day is Today.
